

CERTIFICATE OF COMPLETION

Ashar

completed a seven-day introduction to Python, starting from a single line of code and finishing with a working program of their own design.

WHAT WAS LEARNED

01

Showing text, and storing things in variables

```
print("Hello") · name = "Ashar" · print(name)
```

02

Doing maths, and asking the user a question

```
apples + oranges · int(input("Type a number: "))
```

03

Making decisions — and a first guessing game

```
if guess == secret: · else: · indentation
```

04

Lists: storing many things and finding one

```
fruits[0] · len(fruits) · fruits.append("mango") · "banana" in fruits
```

05

Loops and randomness — the game gains hints

```
for i in range(5): · random.randint(1, 10) · break
```

06

Writing brand new commands of your own

```
def greet(person): · greet("Ashar")
```

07

Putting all six days into one finished program

```
quiz.py · questions & answers · give_grade(score)
```

THE PROGRAM, RUNNING

You have 5 sushi rolls and I give you 5 more. How many? 10
Correct!
What is 3 times 4? 12
Correct!
How many days in a week? 7
Correct!
Your final score is 3 out of 3
PERFECT! You are a Python genius!
